

What is Econeas?

Econeas is, quite simply, the future of antifouling technology. This copper-free biocide offers unsurpassed protection at very low concentrations. In fact, tests show

ECONEA

that antifoulants made with 6% Econeas are as effective as those made with 50% copper. This is great news for boaters who are looking for consistently superior antifouling protection, but it's also good news for the environment. Econeas's copper-free formulation breaks down quickly in the environment and its breakdown products are biodegradable. Econeas is non-corrosive to metals and is safe for use on aluminum and all other underwater metals.

Pettit's Ultima Eco combines the power of copper-free Econeas biocide with our exclusive Ultima self-polishing ablative technology to provide the most advanced antifouling paint available. Ultima Eco wasn't designed to be a seasonal copper-free bottom paint like the competition. Ultima Eco is a true multi-season, dual-biocide, self-polishing, ablative that will outperform the most popular multi-season ablative paints on the market.

We all know that more biocide in an antifoulant means better performance and longer lasting protection. Pettit has proven this over and over with products like Ultima SR-60, Trinidad, Trinidad SR, and Horizons. Ultima Eco contains over 53% more Econeas than Interlux Pacifica Plus, and over 106% more than Sea Hawk Smart Solutions. This impressive concentration of Econeas biocide not only provides better antifouling protection, it enables Ultima Eco to be the world's first true multi-season, copper-free bottom paint.

But Econeas's potent protection against hard growth, like barnacles and zebra mussels, is only part of the secret of Ultima Eco's success. Janssen PMP, the company that manufactures Econeas, recommends the use of a second biocide to control soft growth. So Pettit formulated Ultima Eco with Zinc Omadine, a versatile workhorse in the world of biocide technology. Zinc Omadine is so safe it is FDA approved for use in antidandruff shampoo, yet it delivers real muscle in the fight against marine slime, algae and other soft growth. The powerful one-two punch of Econeas and Zinc Omadine make Pettit's Ultima Eco simply the best choice available in antifouling protection.

Which Econeas product is right for you? The choice is simple...	Pettit Paint Ultima Eco 	Interlux Pacifica Plus 	Sea Hawk Smart Solutions 
Amount of Econeas Biocide	6.0%	3.9%	2.9%
Amount of Zinc Omadine	4.8%	4.12%	0.00%
Offers Multi-Season Performance	YES	NO	NO
