

Beautiful, Sensible, and Efficient

Words that describe both the new edition of the Back Cove Yachts family of boats and the premium bottom paint specially selected for its hull.

Back Cove Yachts, looking to throttle up performance with its new outboard options, were seeking additional upgrades to help those engines cruise and achieve top end speeds approximately 10 knots faster than the traditional single diesel Back Cove. It was a simple choice to partner with Pettit and apply the industries hardest, fastest, slickest, most burnishable, antifouling paint, Pettit's Black Widow.

Its powerful dual biocides provide multi-season protection in all waters. Black Widow makes an excellent paint for the bottom of any boat where speed is the number one priority. Black Widow contains four strong slickening agents: Molybdenum Disulfide, PTFE, Graphite and Silicon.

The Back Cove Yachts 340 will launch into full production and boat show appearances beginning in September 2018.
