PETTIT MARINE PAINT TO LAUNCH NEW UNDERWATER METAL ANTIFOULING PROTECTION KIT

Marine Paint Company Continues Pioneering Innovative Solutions

Rockaway, N.J. – Pettit Paint is excited to announce the launch of Running Gear Guardian™, a product geared for superior underwater protection for all metals. Running Gear Guardian™ is designed to prevent fouling on all underwater metal running gear, such as Propellers, Trim Tabs, Propeller Shafts and Rudders, Prop Struts, Sail Drives, Strainers, Bow and Stern Thrusters and other underwater metal or running gear, by providing incredibly effective and long-lasting protection. Even low levels of fouling on running surfaces can cause efficiency losses up to 20%. Keep your vessel performing at its best with Running Gear Guardian™.

Benefits of using Running Gear Guardian™

- Multi-season, dual-biocide formula prevents all fouling
- Easiest application with long-lasting results
- Excellent adhesion & corrosion protection
- Durable, slick, ultra-smooth finish
- Increased fuel efficiency

“There are many kits on the market today for underwater metals; however, they all use similar technology and have hefty price tags. We’ve tasked our R&D Team to develop a kit that will cover ALL underwater metals such as struts and shafts, sail drives, trim tabs, props and so much more, but offer it at a price point that any boater can afford. Running Gear Guardian™ utilizes a simple, easy-to-apply, single component primer and an antifouling-based top coat that works very well at preventing all fouling, as well as bonding tenaciously to underwater metals. This combination of ease of use, proven antifouling technology, along with aggressive pricing, should be very attractive for all boaters in all waters.”, says Tom Maellaro, VP of Marketing for Pettit Paint.

Running Gear Guardian™ will be available in black starting January 1, 2021. Application can easily be performed by brush, roller, or spray.
